Paris, France
Work authorization: France –
Passeport Talent

Languages

- Spanish – Native
- English – C1
- French – C1

Skills

- Applied AI
- Machine Learning, Deep Learning,
RAG, Agentic AI, Intelligent
Automation
- Computer Vision
- 2D/3D Vision, Object Detection,
Segmentation, Reconstruction,
Medical Imaging
- Data & Systems
- Python, SQL, PySpark, Databricks,
Docker, Azure, GCP
- Architecture & Leadership
- System Design, Industrialization,
Mentoring, R&D Structuring

Profile

Data & AI engineer with 10+ years of experience evolving from statistics, analytics, and machine learning toward end-to-end ownership of increasingly complex AI solutions.

Combines deep Computer Vision and 3D expertise with intelligent automation, agentic AI, and system architecture, taking ambiguous problems from framing and technical design through hands-on implementation, validation, and preparation for industrial use.

Experience

Senior Data & AI Solutions Engineer

Expleo Group (France)

Nov 2023 – Present

Design and implement Data & AI solutions across industrial and innovation programs, from ambiguous problem framing to architecture, validation, and industrialization.

- Applied AI & Intelligent Automation:** Designed reusable RAG and multi-agent architectures supporting multiple use cases, including enterprise knowledge access, RFP automation, and technical-document validation.
- Industrial Computer Vision:** Owned an automated vehicle-defect detection solution from requirements and data strategy through RetinaNet development, out-of-time validation, deployment, and production follow-up.
- AI & Data Systems:** Designed scalable 3D/geospatial processing architectures, making trade-offs across performance, cost, reproducibility, and deployment constraints; currently contributing to industrial data analysis and dashboard architecture in a GCP/BigQuery environment.
- Technical Leadership:** Defined reusable technical approaches, structured R&D work, mentored engineers, and translated ambiguous business needs and technical trade-offs into actionable solution decisions.

Research Engineer – Computer Vision & 3D

CNRS (France)

Jul 2023 – Nov 2023

Developed multi-view 3D reconstruction and AI-based motion-tracking pipelines in Python/C++, including CoTracker and acquisition workflow optimization.

Doctoral Researcher – 3D Computer Vision for Healthcare

Université d'Orléans & PUCP

2019 – 2023

- Built an end-to-end RGB–thermal 3D pipeline for chronic-wound monitoring, from acquisition and reconstruction to segmentation and visualization.
- Coordinated international clinical data collection (4,000+ images), supervised 5 students and 1 developer, and authored 3 publications + 2 preprints.

Earlier Experience

- Data Science Specialist – LenddoEFL (2015–2018): Predictive credit-scoring models using psychometric, text, and geospatial data across international markets.
- GIS Data Scientist – Business Analytics S.A.C. (2014–2015): Geospatial and predictive analytics for retail and banking.
- Analytics / Data Engineer – EFL Global (2011–2013): ETL, preprocessing automation, reporting, and model monitoring.

Education

PhD, Computer Science & Engineering

Université d'Orléans & PUCP – 3D Computer Vision for Telemedicine

2019 – 2023

MSc, Statistics

Pontificia Universidad Católica del Perú

2015 – 2016

BSc, Statistical Engineering

Universidad Nacional de Ingeniería – Top of class

2006 – 2011
